SUMMARY

Computer Science undergraduate at the Singapore Institute of Technology, specializing in Real-Time Interactive Simulation, with hands-on experience in game development, computer graphics, and C/C++ programming.

Lead a team to develop a custom 2D game engine from scratch in an eight-person team, supporting C++ and C# scripting with a built-in replay system. Developed and shipped two original games in C and C++, taking them from concept through completion.

Interested in gameplay programming, graphics programming, engine development.

EDUCATION

Singapore Institute of Technology *Sep 2024 – Present*
BSc (Hons) in Computer Science in Real-Time Interactive Simulation
Computer Graphics, C++, Game Development, Operating Systems, Physics, Math

Singapore Polytechnic *Apr 2019 – May 2021*
Diploma in Information Technology
Virtual Reality, Software Development, C#, Web Development, Game Development, Business

Institute of Technical Education *Jan 2017 – Apr 2019*
Higher NITEC in Business Information Systems
Networking, Computer Hardware, Accounting,

SKILLS

Programming Languages: C, C++, C#
Graphics & Rendering: OpenGL, Computer Graphics, Vulkan
Game Development: Game Engine Architecture, Game Design, Game Development
Game Engines & XR: Unity, Unreal Engine, Virtual Reality, AR/VR
Software & IT: Software Development, Web Development, Networking, Computer Hardware, IT Infrastructure, Technical Support, Data Structures, Algorithm Analysis

Work EXPERIENCE

Junior Software Engineer
Cxrus Solutions
- Worked in a junior software engineering environment with exposure to IT infrastructure and technical support.
- Applied software development and troubleshooting knowledge to technical tasks and system-related issues.

PROJECTS

Tech Lead – Unity Game Development (Current)
- Leading a development of a unity game alongside custom editor tools and plugin built to streamline custom design team workflow
- Building an AI toolkit for designers to adjust and tune AI behaviours
- Development of procedural level generation system for 3d environments
- Implementing a reply system for recording and play back of gameplay.

Tech Lead - Custom 2D Game Engine Game Engine Architecture
- Leading a custom 2D game engine from scratch as part of an eight-person development team.
- Built the engine with support for both C++ and C# scripting.
- Contributed to a built-in replay system for recording and reproducing gameplay.
- Gained practical experience in engine architecture, debugging, real-time systems

Programmer - Original Game Projects
- Developed and shipped two original games using C and C++.
- Took projects from initial concept through development and completion.
- Applied programming, game design, and problem-solving skills throughout development.
